Facts and figures provide a better basis than opinion for policy and practice change. Drawn largely from government sources, these facts chart the extraordinary rise in prison numbers over the last twenty years, inflation in sentencing and the social and economic consequences of overuse of custody. They reveal the state of our overcrowded prisons and the state of people in them, the impact of deep budget cuts, the pace and scale of change in the justice system and the scope for community solutions to crime.
England and Wales have the highest imprisonment rate in western Europe. The prison population has risen by 80% in the last 30 years—and it is currently projected to rise by a further 7,400 people by 2024.¹

In England and Wales, we overuse prison for petty and persistent crime.² In 2022, nearly two in five people were sentenced to serve six months or less. The majority had committed a non-violent offence. Nearly two in five were sentenced to serve six months or less. Over 43,000 people were sent to prison to serve a sentence. Short prison sentences are less effective than community sentences at reducing reoffending.³ Community sentences are particularly effective for those who have a large number of previous offences and people with mental health problems.⁴ Yet, their use has more than halved in only a decade. Suspended sentences account for just 4% of all sentences.⁵

Fewer than one in 10 people surveyed said that having more people in prison was the most effective way to deal with crime. Early intervention, such as better parenting, discipline in schools and better rehabilitation, were all rated as more effective responses.⁶

---

² Table A2.7 and A2.9i, Ministry of Justice (2023) Offender management statistics: Prison receptions 2022, London: Ministry of Justice
⁵ Table Q5.1b and Q5.4, Ministry of Justice (2023) Criminal justice statistics quarterly December 2022, London: Ministry of Justice
More than three times as many people were sentenced to 10 years or more in 2022 than in 2008.9

For more serious, indictable offences, the average prison sentence is now 62.4 months—more than two years longer than in 2008.10

People serving mandatory life sentences for murder are spending more of their sentence in prison. On average they spend 18 years in custody, up from 13 years in 2001.11

Judges are also imposing longer minimum terms.12 The average minimum term imposed for murder rose from 13 years in 2000 to 21 years in 2021.13

Many are released from prison, only to return there shortly after.

Since their introduction, the number of people recalled back to custody has increased, particularly amongst women. 8,357 people serving a sentence of less than 12 months were recalled to prison in the year to December 2022.16

Safety in prisons

Safety in prisons has deteriorated rapidly during the last ten years. However, the pandemic and associated regime has muddled the picture. In the last year recorded assaults have risen, and whilst recorded self-harm incidents decreased slightly for men, they have increased by more than third for women.

322 People died in prison in the year to March 2023

82 deaths

More than a quarter were self-inflicted of which 78 were men and 4 were women

Assaults

The recorded rates of assault and serious assault fell sharply during the pandemic

Assaults on staff have reduced but remain close to historically high levels

2014 2018 2022

3,640 9,742 7,229

477 958 709

Serious assaults on staff have dropped by around a quarter over the previous year.

Source: Safety in custody statistics quarterly update to December 2022

Self-harm

Recorded rates of self-harm remain close to record levels

The death rate has been rising over the last decade

Women account for a disproportionate number of self-harm incidents in prison—despite making up only 4% of the total prison population.

But in recent years there has been a significant rise in self-harm incidents by men.

2012 36% 64%
2014 20% 74%
2016 23% 77%
2018 19% 81%
2020 19% 81%
2022 22% 78%

Proportion of all self-harm incidents
Many justice secretaries, many promises, but little delivered

£1.3bn for nine new prisons, with 10,000 new places by 2020

£2.5bn for 10,000 new places in addition to 3,360 already under way

£4bn for total of 18,000 new places, inc. four new prisons

£3.8bn for total of 20,000 new places by the mid-2020s inc. up to 2,000 new temporary places

Announcement

Prison places built or announced

New housing block at HMP Stocken (206 places)

Expansion of HMP Rye Hill (462 places)

HMP Five Wells (1,680 places)

HMP Morton Hall reopens as prison (353 places)

HMP Fosse Way (1,700 places)

HMP Millsike (1,440 places)

To date

Source: Ministry of Justice announcements and HM Treasury Autumn Budget and Spending Review 2021

*Includes the brief tenure of Brandon Lewis between 6 September and 25 October 2022

The government has committed to building 20,000 new prison places by the mid-2020s to meet rising demand. But just 5,202 places had been built by 5 June 2023. Even if all of the government’s planned capacity projects are delivered on time there will still be a short fall of 2,300 prison places by March 2025.

Nearly 10,700 prison places have been closed since 2010—many of them old and/or dilapidated. At the same time, nearly 11,000 places have been created, a net increase of just 300 prison places.

The government projects that the prison population will rise by a further 7,400 people to reach 93,200 by 2024—placing further pressure on places.

HM Prisons and Probation Service (HMPPS) has experienced significant cuts to its budget in recent years. Between 2010–11 and 2014–15 its budget reduced by 20%, and despite recent increases its resource budget remains 11% lower in real terms than in 2010–11.

The cost of a prison place reduced by 15% in real terms between 2009–10 and 2021–22. The average annual overall cost of a prison place in England and Wales is now £46,696.

The number of frontline operational prison staff (bands 3–5) was cut by 26% between 2010–2017.

The government announced £100m to partially reverse the decline, committing to recruit a further 2,500 officers by December 2018. This target was achieved, but there are still 2,542 (10%) fewer staff than there were in 2010.

More than one in seven (15%) of employed officers left the service last year.

Staff retention remains a problem—Nearly half of officers (47%) who left the service last year had been in the role for less than three years, more than a quarter (25%) left after less than a year.

Staff experience has declined as a consequence. More than third (35%) of officers have been in their post for less than three years, up from around one in eight (13%) in 2010.
People on remand

For many people, their first experience of prison is on remand. This might be ahead of their trial, or whilst they are awaiting sentencing having been found guilty.

People remanded to custody to await trial are innocent until proven guilty. 40,424 people were sent to prison before their trial in 2022, an increase of almost 13% compared with 2021.\(^{28}\)

On 31 March 2023 there were 14,591 people in prison on remand, a rise of almost a half (45%) in just three years, and is currently at a near record level.\(^{29}\)

People on remand currently make up more than one in seven people in prison (17%). Around two-thirds are awaiting trial (67%), whilst the rest await sentencing.\(^{30}\)

Almost half (49%) of all people who entered prison on remand to await trial in 2022 were accused of non-violent offences—18% for drug offences and 11% for summary non-motoring offences.\(^{31}\)

Almost a third (32%) of people on remand, 4,582 people, have been there for longer than six months. More than one in 20 (5%) have been there for two years or more (770 people).\(^{32}\)

One in 10 people (10%) remanded into custody by the magistrates’ courts in 2022 were subsequently acquitted. A further 11% of people received a non-custodial sentence. In the Crown Court, the figures were 14% and 16%, respectively.\(^{33}\)

Black men are 26%, and men with a mixed ethnic background are 22% more likely to be remanded in custody at the Crown Court than white men.\(^{34}\)

More than third (35%) of self-inflicted deaths in 2022 involved people held on remand—far higher than the proportion of the prison population they represent (17%).\(^{35}\)

Almost half (45%) of children in custody are on remand.\(^{36}\)

More than a third (35%) of children remanded into custody in the year to March 2022 were subsequently acquitted—a further two in five (38%) were given a non-custodial sentence.\(^{37}\)
Black, Asian and minority ethnic people in prison

Over a quarter (28%) of the prison population, 22,605 people, are from a minority ethnic group. 12% identify as Black/Black British; 8% as Asian/Asian British, and 5% as mixed/multiple ethnic groups. The economic cost of black, Asian and minority ethnic (BAME) over-representation in our prison system is estimated to be £234 million a year.

Research has found a clear direct association between ethnic group and the odds of receiving a custodial sentence. Black people are 53%, Asian 55%, and other ethnic groups 81% more likely to be sent to prison for an indictable offence at the Crown Court, even when factoring in higher not-guilty plea rates.

Black and Asian people in prison are more likely to be serving long sentences than other groups. 17% of people in prison on a life sentence identify as black, and 8% as Asian. 15% of people serving a determinate sentence of over 20 years identify as black, and 12% as Asian.

There are now more than two and a half times more Muslims in prison than there were in 2002. In 2002 there were 5,502 Muslims in prison, by 2022 this had risen to 14,037. They now account for 17% of the prison population but just 6% of the general population.

Muslims in prison are far from being a homogeneous group. Some were born into Muslim families, and others have converted. 36% are Asian, 28% are black, 19% are white and 10% are mixed.

Only 157 people, 1% of Muslims in prison, are currently there for Islamist extremist terrorism-related offences. The number of Muslims in prison for terror offences peaked at 185 in 2017. By contrast the number of people in prison for right-wing extremism has risen to 64, up from six people in 2016.

4% of men and 3% of women in prison said that they are Gypsy, Roma or Traveller, compared to an estimated 0.1% of the general population in England. Inspectors found that most prisons they visited were still not aware of their existence or needs.

Inspectors found that prison staff underestimate the cultural requirements of Gypsy, Roma or Traveller and BAME people in prison. A third of BAME prisoners said their ethnicity directly influenced their rehabilitation and resettlement planning, whereas almost no staff considered ethnicity to have any impact.
People with neurodivergent conditions

A recent joint review by criminal justice inspectorates estimates that around half of those entering prison have some form of neurodivergent condition which impacts their ability to engage. This is much higher than in the outside community, where the working consensus among professionals is that around 15–20% of individuals have at least one neurodivergent condition.48

More than one in four people (27%) in prison who took an initial assessment had a learning difficulty or disability (LDD) confirmed through an LDD assessment.49 Despite this, the Offender Assessment System (OASys) only records 924 prisoners (1%) as having a learning disability.50

A recent Equality and Human Rights Commission report into inclusive justice found that three out of four criminal justice professionals surveyed in England and Wales said that defendants’ impairments were sometimes or always missed.51

A study has estimated that a quarter (25%) of people in prison have an attention deficit/hyperactivity disorder (ADHD), around one in 10 (9%) have an autism spectrum disorder, and around one in 10 (9%) have an intellectual disability.52

Over the past decade the government has invested in liaison and diversion services in police custody suites and the criminal courts. These aim to identify people who have mental health, learning disability, substance misuse or other vulnerabilities and divert them towards a setting more appropriate for treatment.53

The roll-out of liaison and diversion services achieved 100% coverage across England in March 2020.54

Foreign nationals in prison

The term ‘foreign national prisoner’ encompasses many different people who have committed a criminal offence. People may have come to the UK as children with parents; they may be second generation immigrants—often from former colonies; asylum seekers; people who have been given indefinite leave to remain as refugees; European and European Economic Area nationals or Irish nationals; people who have been trafficked into the country; or they may be visitors or workers.

Foreign nationals (non-UK passport holders) currently make up 12% of the prison population in England and Wales. On 31 March 2023 there were 10,148 foreign nationals in prison.55

Foreign national prisoners come from 162 countries—but over half are from nine countries (Albania, Poland, Romania, Ireland, Jamaica, Lithuania, Portugal, Pakistan and Somalia).56

A lower proportion of foreign nationals are in prison for violent and sexual offences than the overall population—27% and 14% compared with 29% and 17%, respectively. A higher proportion are in prison for drug offences (26% compared with 18%).57

One in 10 (10%) women in prison are foreign nationals.58 Some are known to have been coerced or trafficked into offending.59

More than 63,000 foreign national offenders have been removed from the UK since 2010. 3,079 of these were removed in 2022.60

387 people were still held in prison at the end of March 2023 under immigration powers, despite having completed their custodial sentence. This has decreased by 38% in the past year.61

Community sentences for women have dropped by more than half in a decade. Use of suspended sentences has fluctuated, but only account for 3% of all sentences. Use of short prison sentences has halved

Many women in prison have **high levels of mental health needs and histories of abuse.** Rates of self-harm are at a record high

Source: Criminal justice statistics quarterly: December 2022. Outcomes by offence data tool

Source: Safety in custody statistics quarterly update to December 2022
Most women entering prison to serve a sentence (69%) have committed a non-violent offence.62

In 2022 more women were sent to prison to serve a sentence for theft than for violence against the person; sexual offences; and robbery combined.63

The proportion of women being sent to prison to serve very short prison sentences has risen. In 1993 only a third of custodial sentences given to women were for six months or less—in 2022 it was more than half (53%).64

Three-quarters of women surveyed in prison (76%) reported that they had mental health issues compared with around half of men (51%).65

Less than half of women (47%) left prison with settled accommodation in 2021–22.66

Children and young adults in prison

The number of children (under-18s) in custody has fallen by 86% since its peak in 2008.67 They are also being convicted of fewer crimes—with proven offences also down by 88% between 2008 and 2021.68

At the end of April 2023 there were 458 children in custody—11 children were aged 14 or younger.69

More than fifth (22%) of children in custody in 2021–22 were there for non-violent crimes.70

A disproportionate number of children in custody come from a care background. Fewer than 1% of all children in England are in care,71 but almost half of children in secure training centres (46%) and more than half in young offender institutions (62%) have been in care.72

Almost half of children in custody (49%) are from a black, Asian or minority ethnic background.73 Nearly one in four of children in custody (24%) self-report as Muslim and more than one in 20 (6%) as from a traveller background.74

Many children who are alleged to have committed offences are tried and sentenced in the Crown Court as adults after turning 18 while awaiting a trial. In the year to June 2021, 1,225 people who were alleged to have committed offences as children were dealt with in the Crown Court. Equivalent data for the magistrates’ courts does not exist.75

Two of the three STCs in England and Wales have closed following serious and widespread concerns about the care and safety of children held there. Medway closed in early 2020 and Rainsbrook in 2021.76

Restraint of children in custody remains high. In the year to March 2022, there were 772 incidents of restraint per 100 children in custody each year, up from 433 in 2015.77

The number of incidents of self-harm by children in custody is increasing. In the year to March 2022 there were 289 incidents of self-harm for every 100 young people in custody each year, up from 118 seven years ago.78

11,464 young adults (aged 18–24) are currently in prison in England and Wales—they account for 14% of the total prison population.79

Prison works?
Child custody has dropped significantly—and so has offending.

Falling numbers—but declining safety
Rates of self-harm and use of restraints are high.

There are now half (50%) as many young adults in prison in England and Wales than in 2010.\(^{80}\)

Safety is declining for young adults in prison. The number of assaults has risen by almost two-thirds (64%) in the last decade, despite a significantly smaller population. There were more than 5,800 assaults initiated by young adults in 2022—accounting for over a third (37%) of all such incidents.\(^{81}\)

Mental health

More than two-thirds (67%) of people in prison surveyed by inspectors between 1 July 2021 and 31 March 2022 reported having mental health problems. Less than a third (32%) said it was easy to see a mental health worker.\(^{82}\)

Three-quarters of women in prison (76%) reported that they had mental health problems compared with around half of men (51%).\(^{83}\)

A study of 469 male and female prisoners found that 42% of participants had been previously diagnosed with a mental illness. Some of the most common diagnoses include personality disorders (27%), anxiety disorders (27%), PTSD (20%), psychotic disorders (10%) and autism (4%).\(^{84}\)

A Justice Committee report found that around 10% of those in prison are receiving treatment for mental illness, with some prisons estimating as much as 70% of the population having some form of mental health need at any one time.\(^{85}\)

1,057 people were transferred from prison to a secure hospital in 2022, the second highest number since records began.\(^{86}\)

At a third of prisons inspected in 2019–20 officers had not undergone adequate mental health awareness training, despite repeated recommendations.\(^{87}\)

Reoffending rates are lower for people given a community sentence subject to a mental health treatment requirement. Rates were 3.5 and 5 percentage points lower, respectively, for people on a community order or a suspended order, than those without such a requirement.\(^{88}\)

\(^{86}\) Table 7, Ministry of Justice (2022) Offender management statistics: Restricted patients 2022, London: Ministry of Justice

Older people in prison

With prison sentences getting longer, more people are growing old behind bars. People aged 60 and over are the fastest growing age group in the prison estate. The population has grown more than three and a half times in two decades.89

More than one in six people (17%) in prison are aged 50 or over—14,578 people. Of these, 3,824 are in their 60s and a further 1,876 people are 70 or older.90

The number of people in prison aged 50 or over is projected to grow by around 1,000–2,400 people between 2022 and 2026 according to government estimates.91

More than two in five (43%) men in prison aged 50 or over have been convicted of sex offences. The next highest offence category is violence against the person (27%) followed by drug offences (8%).92

368 people in prison were aged 80 or over as of 30 September 2022.93

Life and indeterminate sentences

Many people in prison don't know when, or if, they might be released. 10,867 people are currently in prison serving an indeterminate sentence—16% of the sentenced prison population, up from 9% in 1993.94

Of those 10,867 people, 8,505 people have yet to be released—the remaining 2,362 people are back in prison having been recalled from licence. 7,951 people are serving a life sentence and 2,916 people are serving an indeterminate sentence of Imprisonment for Public Protection (IPP).95

Despite its abolition in 2012, there are 1,355 people in prison serving an IPP sentence who have never been released. Nearly all (98%) are still in prison despite having already served their tariff—the minimum period they must spend in custody and considered necessary to serve as punishment for the offence.96

Of the 1,327 people who have passed their tariff, 216 people are still in prison despite being given a tariff of less than two years—189 of them are still in prison over a decade after their original tariff expired.97

Many people serving an IPP sentence are being recalled back to prison after their release. In the last 12 months 602 people serving an IPP sentence on licence were recalled and returned to custody, whereas only 638 people were either released for the first time or re-released having been previously recalled.98

England and Wales have more people serving life sentences than Austria, Belgium, France, Germany, Italy, the Netherlands, Russia, and Sweden combined—the highest in Europe by a significant margin.99

7,951 people are currently in prison serving a life sentence. Of those, 7,150 have yet to be released—the remaining 801 people are back in prison having been recalled from licence. Of those 7,150 people yet to be released, one in six (15%) have a tariff of 10 years or less, almost half (48%) over 10 years and up to 20 years, and a third (34%) have over 20 years.100

More than one in five people currently in prison on a life sentence (22%) have already served their minimum term. They have spent an average of 9.2 extra years in prison.101

The Legal Aid, Sentencing and Punishment of Offenders Act 2012 replaced the IPP sentence with a new Extended Determinate Sentence (EDS).

As of March 2023, there were 7,366 people serving an EDS—more than one in 10 (11%) of the sentenced prison population. This figure is 11% higher than the previous year.102

The Parole Board decides whether prisoners who are serving certain types of sentences can be released. These include all indeterminate sentences, some fixed-term sentences and cases where people have been returned to custody. They can also advise on moves of some prisoners from a closed to an open prison with fewer restrictions.\textsuperscript{103}

The board considers a wide range of evidence before arriving at a decision, including the original evidence of offending, sentencing remarks and evidence of changes in behaviour and attitude whilst in custody. There are three different potential outcomes—release; a recommendation for progression to an open prison; further review (a knock back) where the person remains in custody where they are eligible for review again within two years.\textsuperscript{104}

Only around one in four people considered by the Parole Board each year are released. Fewer than one of every 200 prisoners the Parole Board directs for release go on to be convicted of a serious offence within three years.\textsuperscript{105}

New rules introduced by Dominic Raab have tightened the criteria for approving transfer from closed to open conditions. Since this change nearly five in six Parole Board recommendations for transfer are being rejected by officials at the Ministry of Justice, whereas more than nine in 10 were previously approved.\textsuperscript{106}

A Freedom of Information request submitted by the Prison Reform Trust revealed that since the changes were introduced, nearly two in five cases (38\%) were rejected on the grounds public confidence, a criterion not specified in any public guidance and over which the person in question has no control. A further request revealed that not a single case had been referred to the secretary of state personally and that each decision had been overseen by one unnamed official in the Ministry of Justice.\textsuperscript{107}

Most people serving an Extended Determinate Sentence are not automatically released at the half-way point of their sentence. Instead, many will only become eligible for a Parole Board hearing once they have served two-thirds of their sentence. Between 2017–2021, less than half (42\%) were released at their first hearing.\textsuperscript{108}

Rehabilitation and resettlement

Reoffending rates are hard, if not impossible, to measure. Published figures almost invariably use recidivism as a proxy measure. But recidivism can be affected by many factors, in particular the ability of the police to detect crime and the priorities they set in doing so. In this section, we use published material on recidivism as the best available indicator of probable trends in reoffending.

**Reconviction rates within a year of release are high**—for those serving short sentences of less than 12 months, the rates are even higher.

*Latest available data for women taken from Proven reoffending statistics: January to March 2017

A recent study has estimated the annual total economic and social cost of reoffending at £18.1bn. 109

Research for the Sentencing Council found that “the current evidence does not suggest that increasing the length of prison sentences is an effective way to reduce reoffending”. It also found that “the evidence against the effectiveness of short custodial sentences is amongst the most robust”. 110

**Purposeful Activity**

Just a quarter of male prisons (25%) received a positive rating from inspectors in 2021–22 for purposeful activity work—continuing the decline from half of prisons in 2016–17. 111

A recent Ofsted and HM Inspectorate of prisons review found the current quality of prison education provision to be extremely poor. Of the 22 inspections of prisons and young offender institutions conducted by Ofsted in 2021–22, only one institution was judged to be providing education, work or skills at a reasonable standard. 112

Around half (49%) of prisoners reported being in their cell for more than 22 hours a day, rising to around two-thirds (67%) on the weekend. This was a deterioration from 2018–19 when around a quarter were locked up during the working day. 113

49,855 adults in the prison system participated in education in the 2021–22 academic year—far fewer than the 2014–15 peak of more than 100,000. 114

Some people are entitled to receive a Subsistence Payment to help them on release—in 2021 this was raised from £46 to £76, the first increase in 26 years, and is set to increase annually in line with the CPI index until 2024—25. 116 However, thousands of prisoners are ineligible, including those released from remand, fine defaulters and people serving less than 15 days. 117

Resettlement

Nearly everyone in prison will be released at some point. Last year 46,034 people were released. 115

For people with more than 50 previous offences, the odds of reconviction when a short prison sentence is used rather than a community sentence ↑ 36%
The government has committed to spend £200m a year by 2024–25 to support people leaving prison to find jobs, accommodation and access substance misuse treatment.¹¹⁸

Employment

For many, having a criminal conviction is a barrier to leading a law-abiding life on release. The Rehabilitation of Offenders Act 1974 gives people with spent convictions and cautions the legal right not to disclose them when applying for most jobs. The government has recently changed the law to reduce how long some people need to disclose their conviction.¹¹⁹

Fewer than one in five people (19%) are in employment six weeks after leaving prison. After six months, the figure rises to almost one in three (30%). Although both figures are low, they represent a rise from 10% and 14%, respectively, compared with two years ago.¹²⁰

More than 150 employers so far, including the entire Civil Service, have signed up to Ban the Box—removing the need to disclose convictions at the initial job application stage as a first step towards creating fairer employment opportunities for people with convictions.¹²¹

Accommodation

Less than half of people (48%) released from prison between April 2022–March 2023 had settled accommodation on release. More than one in 10 (11%) were homeless or sleeping rough. After three months, around two-thirds (68%) had settled accommodation and 7% were homeless or sleeping rough.¹²²

Having and retaining settled accommodation is “a key factor in successful rehabilitation”. A recent study by inspectors revealed that two-thirds of people without settled accommodation on release were later returned to custody, either recalled or re-sentenced, while around one-third of those with settled accommodation were.¹²³

HMPPS has developed the Community Accommodation Service (CAS) intended to combine the existing Approved Premises (AP) and Bail Accommodation and Support Service (BASS), and provide additional transitional accommodation. The service provides up to 12 weeks of temporary accommodation, with additional support to get people into long-term settled accommodation. In its first year, between July 2021 and June 2022, 2,300 people were accepted onto the scheme.¹²⁴

Financial exclusion

Many people in prison are released with debts which have built up during their sentence—adding to the problems they face on release. These include outstanding fines, rent or mobile phone contracts. Inspectors found that in many cases no action was taken before release, despite problems being apparent at the start of a sentence.¹²⁵

People cannot make a claim for Universal Credit until they have been released from prison. Concerns have been raised that this is placing people into unnecessary hardship on release.¹²⁶
